

Secure Comms Setup Guide

Signal, ProtonMail, and VPN Team Setup

I. Signal Messenger Deployment

Configure Signal group admin settings: only admins invite, enable disappearing messages, setup safety numbers verification.

II. ProtonMail Configuration

Create secure accounts. Enable two-factor authentication (2FA). Use ProtonMail's built-in pgp keys for external email encryption.

III. Burner Phone Protocols

Purchase burner devices with cash. Do not link burner accounts to your personal name, email, or credit cards. Rotate SIMs.

IV. Encrypted File Sharing

Deploy local-first sharing via OnionShare or secure, zero-knowledge cloud drives (e.g. Proton Drive).
